

Guideline Measurements To Use When Creating Your Basic Lettering

These are not perfect measurements. They may need to be adjusted in your software. They are basic measurements that I have uses with the Pulse, the Wilcom, and Hatch software.

4mm or .15 inch Lettering - .15mm guideline

5mm or .20 inch Lettering - .20 mm guideline

6mm or .23 inch Lettering - .25 guideline

8mm or .30 inch Lettering - .30 guideline

10mm or .40 inch Lettering - .35 guideline

12mm or .50 inch Lettering - .40 guideline

14mm or .55 inch Lettering - .45 guideline

16mm or .63 inch Lettering - .50 guideline

18mm or .70 inch Lettering - .55 guideline

25.4mm or 1 inch lettering - .60 guideline

You must sew them out to see if they work with your software and embroidery machine. Not all embroidery machines sew out the same. You may need to make some adjustments.
